

Find and Connect to Thousands of APIs

One SDK. One API Key. One Dashboard.

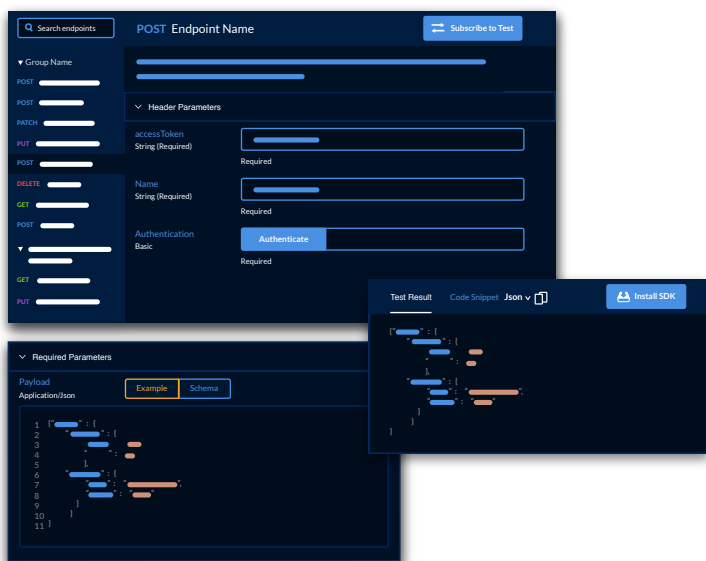

RapidAPI is the world's largest API Marketplace
with over 1M developers accessing more than 10,000 APIs.

Search and Find the Right API for Your Application

Establish one location for all your APIs and avoid having to search multiple sites.

Choose APIs by reviewing the popularity score, average latency, and average success rate directly in the search results.

Browse APIs by category, collection or type by using the dropdown menu, search bar or RapidAPI's collections, a grouping of APIs based on similar or complementary functionality.

Connect to an API and Integrate it into Your Application

Gather information about each API using the endpoints page to view a list of endpoints, documentation, and a code snippet to help you implement the code into your app.

View API documentation - view individual endpoints, their parameters and the response data to quickly understand how the API works.

Subscribe to API plans to start using it. Manage all your API subscriptions and payments through RapidAPI.

Utilize a single key in RapidAPI for all your APIs.

Manage and Monitor the Performance of your APIs

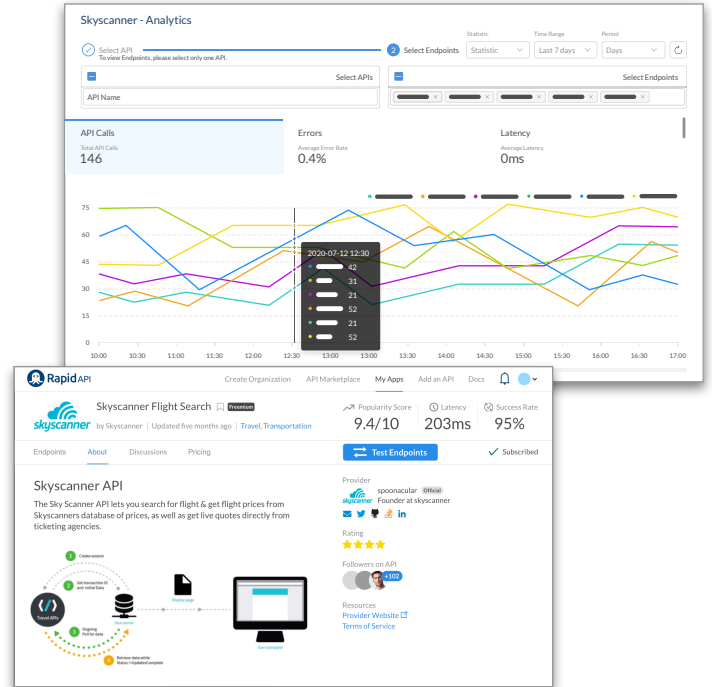

Manage applications and API keys using a single dashboard within RapidAPI.

Monitor API performance by visualizing how many requests are made to different APIs, tracking the number of requests that return an error, and viewing latency data for each API.

Debug faster by inspecting the logs for all requested data.

View usage and billing information for a breakdown of API spending, including the monthly recurring and overage charges.

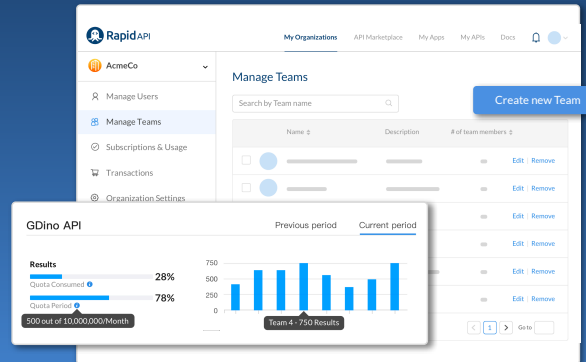

Manage subscriptions from one place including quota usage and time remaining until the quota limit resets.

RapidAPI for Teams

Invite team members to join RapidAPI for Teams, where you can:

- ✔ Share internal APIs
- ✔ Share API subscriptions
- ✔ Manage API usage and performance
